Company Profile

We are the software services division of Suparna Exports Pvt Ltd, a leading export house based in India. We are focused on developing custom software solutions to suit your business requirements. We specialize in using next-generation technologies like Java, .Net, XML, EJBs etc. to help our clients e-volve into a major force in the emerging e-market place.

We are in business to deliver Quality services to our clients. Our mission is to partner with clients to enable their success through superior offshore software development services.

We have successfully developed business by understanding and nurturing a selected group of clients and concentrating our efforts on maintaining the highest level of quality service based on our strong expertise and experience.

We have significant strength and experience in developing, deploying and supporting e-commerce applications which are platform independent and integrating these diverse business applications with existing back-end ERP/Legacy systems to e-enable an entire business to work smoothly. We have developed good skills in integrating applications using the latest Middleware technologies.

People

Here at e-Integrity we gather the best of breed analysts, designers and programmers. Each of our team members comes with a fire-in-the-belly attitude to make IT happen. Each one of us believes in using IT to help our customers get solutions that they once dreamed of!

When you outsource your development project to us, you gain an entire team dedicated to fulfilling your requirements. From Concept to Completion, Our team is Your team : a highly qualified and energetic team of experienced software developers, test engineers and project managers to create a quality solution to meet your every IT requirement.

Our quality conscious developers and managers constantly strive for excellence in mastering cutting edge technologies. This coupled with our professional and customer centric approach helps us provide best value solutions to our customers.

The corporate environment at e-Integrity promotes and rewards personal responsibility, empowerment and collaboration. Internally, we are a team with shared responsibilities but a unified goal – to help our clients meet their requirements.

Processes

The foremost thing that one needs to look at before choosing an offshore engineering company to partner with are the processes.

▶ **H**ow well defined are the processes ?
▶ **H**ow manageable are the projects ?
▶ **H**ow transparent is the Organization ?

We at e-Integrity believe that quality processes leads to quality products. We are striving towards implementing the CMM recommendations. We not only believe in doing things rights the first time, but doing it right every time. We understand this and to achieve this we need to create procedures and apply them.

We have done that in the past and will continue to do that. By doing so, we have made our way of working totally transparent to our clients. This not only improves visibility for our clients, but also ultimately leads to achievement of our unified goals - both ours as well as our clients'

Infrastructure

- Java (J2EE)
- Microsoft .Net
- Delphi
- XML
- Middleware such as TIBCO, Webmethods etc
- Application Servers like Weblogic, JRun etc
- Web servers like Apache etc

Development Environment

- Visual Café (IDE)
- Visual Studio (IDE)
- Weblogic/Websphere/JRun
- WinCVS (Version Management)
- Starbase/Starteam (Collaboration)

Tools

- Visio (UML)
- Rational Rose (Modelling/Analysis)

Databases

- Oracle
- MySQL
- SQL Server

OS/Miscellaneous Software

- Solaris
- Windows NT
- Linux
- Unix
- MS Office 2000
- MS Exchange / MS Outlook

Projects @ a glance

Client: **Metafac Inc, NJ, USA**

Title: Report Generator Framework

Scope: This is an add-on application for used for generating various kinds of
                 data analysis for their Network monitoring solution. The application is
                 designed for high flexibility and performance to empower to perform
                 various types of analysis. The application generates analytical as well
                 as graphical reports. It uses the latest Scalable Vector Graphics to
                 create bars, lines, pie and other types of charts on-the-fly based on
                 view required.

Technology: MFC/VC++, COM, XML, XSL, SVG, Windows Installer

Tools: Visual Studio 6.0, Xerces, Xalan

Client: **ECtone Inc, SC, USA**

Title: Real Time e-Connector for Oracle Applications 11i

Scope: This product that was designed and developed involves three basic
                 components. The first being a GUI which the user can use to browse
                 and map a Database to an XML or viceversa. The output of the GUI (a
                 Mapping Info file) will be passed to an DBExtractor or a DBInserter
                 which given a document Identifier or an Input data XML will create a
                 data XML dynamically or will insert it into the DataBase. The third part
                 of the product is an Trigger which starts the whole process, based on
                 real time business events. This also involved developing our own
                 Message Queues for handling multi-user environment.

Technology: Java, XML (SAX and DOM), Swing, Oracle Applications 11i, Oracle DB

Tools: IBM Visual Age, Xerces, Oracle 8i

Business Mission

▶ **T**o improve business of our clients by providing superior quality professional services

▶ **T**o deliver high quality solutions on time at a reasonable cost.

▶ **T**o make a distinguishing contribution to software development industry.

▶ **T**o apply cutting edge technologies to go beyond just satisfying customer requirements.
